

# 10 EASY HACKS TO SAVE MONEY AROUND THE HOUSE

1.

Program your thermostat to go up or down a few degrees when you're out of the house.

2.

Keep your closet doors closed so you're not unnecessarily heating or cooling those spaces.

3.

If your climate allows, use a clothesline to dry your clothes outside and reduce energy costs.

4.

Wash your clothes in cold water, which gets them just as clean but uses less than half the energy of hot water.

5.

Install weather stripping on doors to keep air from escaping.

6.

Plug your electronics into power strips and turn the strips off at night.

7.

Install low-flow fixtures to reduce water usage and save on your utility bill.

8.

Dust your light bulbs to keep them brighter so you won't need to have as many other lights on.

9.

Make your own household cleaners, which saves money and reduces chemical exposure.

10.

Insulate your hot water heater to keep heat from escaping and wasting money.
